

Tier 1 Backtest Report - MGC1! - Feb 2, 2025

Trade Summary

Date: Feb 2, 2025

Session: Globex Open (Sunday 6:00 PM)

Instrument: MGC1!

Direction: Long

Contracts: 3

Setup: Tier 1 Reversal

Entry Price: 2859.6

Exit Prices: 2866.9, 2868.8, 2868.7 (scaled out)

Profit: +\$256

R:R: 3.0R+

Drawdown: 0

SL: Tight to structure, moved to BE under 20 EMA after partial

Execution: Full confirmation after FVZ pullback

Market Structure & Setup Context

Market was trending down into key reversal zone.

CHoCH occurred prior to BOS. BOS confirmed after HH formed.

This was a Non-Failure Swing (NFS) from HL at \$2868.1.

FVZ was built using structural swing origin. Midpoint marked at \$2864.0.

Fractal rescaling of M-shape confirmed optimal entry zone.

Price returned to midpoint and produced bullish engulfing candle at zone.

Entry triggered on that candle close.

Indicators at Entry (2M)

Stochastics:

- 9/3: 18.60

- 14/3: 17.28

- 40/4: 7.50

- 60/10: 10.04

Tier 1 Backtest Report - MGC1! - Feb 2, 2025

MACD Histogram: -0.3 (flipping up)

MACD Line: -4.2

Signal Line: -3.9

LaGuerre RSI: 0.2 (Flat, turning up, red)

CVD: Strong divergence building to reversal

VWAP: ~2.5 SD below mean at entry

Volume: Climax + absorption near zone

Execution Notes

This was a conviction entry. 3 contracts were used due to extremely tight SL and high probability zone.

After partialing 1 contract, SL was moved to BE under 20 EMA.

Remaining contracts scaled out based on price action stall near VWAP & upper zone.

A second entry was attempted on retest of FVZ midpoint after HH failed to form initially.

Used same \$25 risk with tight stop below midpoint.

Second entry was managed until TP.

All signals were aligned: structure, MACD flip, stochastics oversold and turning, LaGuerre flat/ready, CVD confirmed.

Screenshot Reference

Screenshots taken at entry show:

- 15M and 2M structure alignment
- MACD histogram crossover
- Full quad stochs below 20 and turning
- Rescaled fractal M projection
- CVD divergence, volume ramp
